Thank you for the purchase of the Footstep Loops II sound library!

I would like to give you some information at hand to get the most out of this library.

All sound files are named & meta-tagged with a three-digit FPM value, which means Footsteps Per Minute. So if you search for “050 FPM“, you will find all files with that pace.

You can layer all sounds with the same FPM value. Some combinations might not seem to make much sense, but hey, it's art!

All files are seamless loopable and have the exact same length of 30seconds.

In the elements folder you find extra layers which you can add to the footsteps. Probably most important are the jeans and jacket files for adding clothing movement sounds. You probably want to lower the volume of these layers to fit.

In the Footsteps and Clothes folder, you find ready-to-use files of footsteps with clothing sounds already added.

Expert tip: Put two associated files, one from the Footsteps folder, the other from the Footsteps and Clothes folder, into two audio tracks. If you flip the phase of one of the files (or tracks), you will only hear the clothing sounds as a result. This means: By changing the volumes of the sounds towards each other, you can easily adjust the amount of clothing movement sound.

One more tip: If you want to find the right file for a video sequence, measure or tap the needed BPM tempo in your digital audio workstation or use one of the many available tap tempo / BPM online tools to find the right file to start with.

As an owner of the Footstep Loops II sound library, of course you can use all sounds from the Online Footsteps Generator for your projects. Visit our website to find the generator in the sound generators section.
